HD74LS92 ●Divide-by-Twelve Counters

The HD74LS92 contains four master-slave flip-flops and additional gating to provide a divide-by-two counter and three-stage binary counter for divide-by-six. To use this maximum count length of this counter, the B input is connected to the Q_A output. The input count pulses are applied to input A and the outputs are described in the appropriate function table.
